

# The reasons for using concrete have just crumbled.

Pad-to-pad feature eliminates over tightening and totally encircles pipe, providing 360° of contact and support.

If you're still using concrete for joint restraint, you're working too hard. Now there's a better way, the Uni-Flange Block Buster 1300 Restraint Device from Ford Meter Box. Block Buster gives you guaranteed security, in any soil condition. And unlike some other joint restraint devices, it won't point load or distort your PVC pipe.

Block Buster's two-piece design features machined serrations on the inside diameter. These lock the device onto the pipe, providing 360° contact and support. Machined serrations mean Block Buster offers a perfect fit, every time. And our unique pad-to-pad feature makes it impossible to over tighten, so the pipe can't be damaged.

Block Buster can handle the full rated pressure for any PVC pipe class and is available in all sizes, 2" through 36". It also saves you time and money in installation. A one man operation, it can be assembled in minutes, in or out of the trench.

So don't settle for concrete or restraints that don't offer a perfect fit. Break into the future with the Uni-Flange Block Buster 1300 from Ford Meter Box. For more information, contact your Ford Meter Box/Uni-Flange distributor.

Serrated edges lock onto PVC pipe providing total lateral trust restraint.
