

## Tools Recommended for Ford Brass Products

AVOID COSTLY REWORK  
AVOID RETESTING  
AVOID COSTLY DELAYS

The traditional pipe wrench (DO NOT USE) has teeth designed to engage the hard, round surfaces of iron / steel pipe. A pipe wrench can easily damage the relatively soft waterworks brass products. The recommended tools shown below have smooth jaws that fit evenly across the wrench flats on valves and fittings. Considering the potential ills associated with just one leaking valve or fitting, the cost of these recommended wrenches is absolutely a great value.

**REED** Web Address: <http://www.reedmfgco.com>

Catalog No. 02114  
Model RCORP, fits all Ford brass products through 2".

**RIDGID** Web Address: <http://www.ridgid.com>
