Re: Product Recycled Content for LEEDS Certification

The Ford Meter Box Company, Inc., manufactures a full line of waterworks products utilizing preconsumer and postconsumer recycled content materials integral with our resource conservation efforts. The recycled content information presented below is listed by product family based on the percentage weight in accord with the United States Green Building Council (USGBC) and LEED 2009 New Construction and Major Renovations regulation. The product-recycled content includes all preconsumer and postconsumer content complying with LEED Section MR 4 and does not include preconsumer content such as internally generated rework, regrind, or scrap per MR 4 notes 2 and 3. For compliance purposes only the postconsumer content is tabulated since all postconsumer percentages meet or exceed the minimum requirements of Section MR 4.

Product Family	Minimum Percent Postconsumer Recycled Content by Weight
Brass valves, check valves, couplings, elbows, tees, saddles, and other brass products	95%
Iron meter boxes, covers, frames, and lids	35%
Ductile iron saddles	35%
Plastic lids (yokebox and round)	20%
Metersetters, resetters, retrosetters, inside setters and other copper tube products	75%
Pit setters	20%
Coil pit setters	30%
Stainless steel tapping sleeves, repair clamps, inserts, and other stainless steel products	65%
Cardboard boxes and packaging	40%

Should additional information be required please contact us.
