

## FORD'S E-COAT IS NOW ON IRON SADDLES!

In October 2003 Ford Meter Box, the leader in innovative distribution products for the water industry, announced a "running change" with our iron products; i.e., meter boxes, iron covers, iron yokes. Ford's new E-coat is not just another type of paint. It is a process that not only coats, but it enhances and protects iron products unlike any other process used in water works. Today Ford Meter Box is pleased to announce that our iron saddles will include this E-coat feature.

The Ford E-coat finish is superior to other coatings because of the unique surface preparation. Before the finish is electrostatically applied, these saddles are processed through

an extensive pretreatment. Our unique method of cleaning, rinsing, and conditioning iron products prior to coating assures that the coating will maintain its integrity under the most difficult conditions.

The E-coat's high quality, black finish is highly resistant to damage from impact or corrosion. Unlike many epoxy coatings or other types of paint, Ford's E-coat will not chip or crack.

In addition to all of the benefits of our E-coated products, our E-coated iron saddles are approved to ANSI/NSF Standard 61; all at no extra cost to you. For more information about Ford's E-coat, contact your local Ford Distributor or The Ford Meter Box Company.
