

The Meter Setter 11

November, 2003

LOOKING FOR PRODUCTS APPROVED TO ANSI/NSF STANDARD 61?

FORD HAS MORE THAN 10,000!

Ford continues to receive certification from Underwriters Laboratories (UL®) on numerous products. We now have more than 10,000 Ford products that are UL® Classified to the ANSI/NSF Standard 61. These products include brass valves and fittings, yoke parts, saddles, couplings, repair clamps, and the list goes on.

Ford Meter Box is committed to meeting the entire intent of the Safe Drinking Water Act. We certify our products to the Standard instead of offering only compliant products. The certification process considers much more than just lead. Tests for other metals, chemicals and toxicology tests are required for certification to ANSI/NSF Standard 61.

When manufacturers use the term compliant, they usually represent that their product meets the intent of the standard, but have NOT been formally certified to the full Standard by an independent, authorized laboratory. The Classified UL®, EPH symbol, is your

confirmation that Ford products have been successfully tested to the specific requirements of the Standard.

Reasons to use Ford's LXI products.

- LXI products are classified by UL® to meet ANSI/NSF Standard 61.
- More than 10,000 approved items are available - TODAY!
- No additional cost for most items and only those brass products treated through the Kunkel Process cost slightly more.
- Ford Meter Box meets your need for ANSI/NSF Standard 61 approved items with products that are proven and reliable.

If you are looking for products that meet ANSI/NSF Standard 61, make sure you look for LXI on the carton.

For more information how Ford can to meet your ANSI/NSF Standard 61 product needs, contact your local Ford distributor or The Ford Meter Box Company, Inc.
