

EXPANDING YOUR OPTIONS WITH PLASTIC

Ford Meter Box continues to innovate and offer an expanded line of plastic lids. Whether the need is an inset lid, overlapping lid for meter pit covers, crescent box lid, or yoke box lid or riser, Ford has the solution.

Utilities relying on an Automatic Meter Reading (AMR) system to save time, money, and labor discover the Ford high-strength polypropylene lid is an essential component for increased functionality and efficiency. An optional Encoder-Receiver-Transmitter (ERT) bracket positions and retains the ERT to optimize signal transfer through the lid.

Provided as a standard feature, all lids include a tamper resistant lock. The locking feature also prevents incidental removal and damage by lawn equipment or snow removal equipment. This durable plastic lid is UV resistant, impact resistant, and excellent for lawn applications. Plastic lids are recommended and preferred by ERT manufacturers.

Ford currently offers plastic lids for crescent boxes, yoke boxes, long yoke boxes, and jumbo yoke boxes as well as locking lids for all 11.5" meter boxes

(styles, A, W, C & X). Ford continues to develop a wide variety of lids for different applications. For information on our entire line of plastic lids, contact The Ford Meter Box Company or your local Ford distributor.
