

Ford Protector Meter Box

Meter Box Lid Key (MBLK)
sold separately

Designed for warm climates with minimal frost problems, the Ford **Protector** Meter Box provides maximum security for 1-1/2" and 2" meters. Constructed of quality cast iron, the Protector's strong, lightweight, and compact design simplifies 1-1/2" and 2" service installations and provides a long service life.

The **Protector** provides ample room for modern 1-1/2" and 2" disk or turbine meters, as well as an inlet control valve and an outlet coupling and/or check valve. The bottom is fully enclosed to limit soil or pest intrusion, while a drain hole provides drainage. A three piece locking lid, with the same tamper-proof lock that is supplied with the Ford Yokebox, ensures easy access to the meter and valves while keeping out unauthorized persons.

The **Protector** is supplied with a black asphaltic paint; if additional corrosion resistance is desired, an optional fusion-bonded epoxy coating is available. All non-iron parts of the box are either AWWA specification brass (85-5-5-5) or silicon bronze. For information on optional Ford valves and meter fittings, please see Catalog Sections G and H.

PROTECTOR METER BOXES

Features of the Protector Meter Box

Lids have reinforcing gussets for extra strength

Optional Ford valves and meter fittings can be found in Catalog Sections G and H.

Cast iron body meets ASTM specification A48-Class 25. Available coatings are standard black asphaltic paint or optional fusion-bonded epoxy meeting Federal Specification L-C-5308.

Three piece locking lid provides security and easy meter reading and installation.

Lugs to keep lid sections from being removed from the box when center lid is locked

Lock is the same as used on the Ford Yokebox; keys are interchangeable. Meter Box Lid Key (MBLK) sold separately.

Bolts are silicon bronze.

The **Protector** accommodates all modern disk or turbine meters.
