

Ford Yokebox for 1" Meters

The features of the 1" Yokeboxes are similar to those of smaller sizes, and the advantages are the same. Boxes are of cast iron construction. All piping connections to these larger sizes are straight and are female iron pipe threads. They can be adapted to copper or plastic tubing by standard couplings, listed and described in Section J.

The lock is the same as on smaller sizes and operates with the same key – see page 5. Lockless lids are optional. Bases and upper body castings are round, and upper body castings have anchor lugs or flanges cast on the outside which lock into concrete to prevent settling.

Valves are straight inverted key type, properly positioned and connected to the iron base. The meter clamping device ordinarily remains with the base piece but can be removed if desired, to prevent unauthorized use of water.
